Auto Multiple Choice - Bug # 39: continue copy number within one project instead of resetting it to 1 for each invocation on examcopy

Status:	Closed	**Priority:**	Normal
Author:	Pieter Van den Hombergh	**Category:**

Description:	I would like to have two (later maybe more) \begin{examcopy} in my projects.
	In case I want to produce a set of Dutch and German exams in one project; both languages are present in my questions and choices.
	
	Probably the student (or exam number) is not unique, which is caught by sql lite.
	Problem can be probably be solved by resetting the (student) number only once in the latex file processing and not at the start of begin{examcopy}.
	<pre>
	SQL ERROR: DBD::SQLite::st execute failed: constraint failed
	columns student, page are not unique
	SQL STATEMENT: INSERT INTO layout.layout_page
	(student,page,checksum,subjectpage,dpi,width,height,markdiameter,sourceid) VALUES (?,?,?,?,?,?,?,?,?)
	</pre>

- Target version set to 1.1.0

- Status changed from New to In Progress

You're right: it would be better not to reset the copy number. I adapted the LaTeX style file (since revision r981) - please try it.

Works like a charm.

I have another proposal with a solution, \AMCpageref. I will add it as an issue, including my patch.
