

## Howto install AMC with homebrew

(Installation sur OS X EL CAPITAN 10.11.6 – Xcode 8.2.1

d'après le tutoriel de Remy Remy Drouilhet <https://toltex.u-ga.fr/installAMC>)

- Installer les polices La police Linux Libertine + DejaVu
- Installer xcode + xcode-select --install

% BlaBla désigne un commentaire

Exécuter les commandes ligne par ligne

% Installer homebrew

```
mkdir homebrew && curl -L https://github.com/Homebrew/brew/tarball/master | tar xz --strip 1 -C homebrew
```

brew doctor

➤ J'ai le message Your system is ready to brew.

sudo chown -R \$(whoami) /usr/local

brew install wget

brew cask install mactex

% Installation of auto-multiple-choice (v-1.3.0)

Let assume ~/tmp/AMC is the working directory and let execute the following lines in a terminal:

```
mkdir -p ~/tmp/AMC
```

```
cd ~/tmp/AMC
```

```
wget http://download.gna.org/auto-qcm/auto-multiple-choice_1.3.0_sources.tar.gz
```

```
tar xzvf auto-multiple-choice_1.3.0_sources.tar.gz
```

```
wget http://www.dyndoc.fr/tools/AMC/Makefile-homebrew.conf
```

```
cp Makefile-homebrew.conf auto-multiple-choice-1.3.0/
```

**brew link libpng ## Not sure if it is required!**

```
brew install poppler gtk+ homebrew/science/opencv netpbm librsvg docbook-xsl
```

```
wget -O dblatex-0.3.7.tar.bz2 https://sourceforge.net/projects/dblatex/files/dblatex/dblatex-0.3.7/dblatex-0.3.7.tar.bz2/download
```

```
tar xjvf dblatex-0.3.7.tar.bz2
```

```
cd dblatex-0.3.7
```

**python setup.py install --user**

```
python setup.py install
```

```
ln -s ~/Library/Python/2.7/share/dblatex /usr/local/texlive/texmf-local/tex/latex/local/dblatex  
sudo ln -s ~/Library/Python/2.7/share/dblatex /usr/local/texlive/texmf-local/tex/latex/local/dblatex  
texhash  
Message erreur (commande note found)
```

## stop affaire à suivre

```
cd ..
```

```
wget https://www.pdflabs.com/tools/pdfkit-the-pdf-toolkit/pdfkit_server-2.02-mac_osx-10.11-  
setup.pkg  
open pdfkit_server-2.02-mac_osx-10.11-setup.pkg
```

```
## To put possibly inside ~/.bash_profile  
export XML_CATALOG_FILES="/usr/local/etc/xml/catalog"  
export SGML_CATALOG_FILES="/usr/local/etc/xml/catalog"
```

```
brew install gettext
```

```
Message erreur (Warning: gettext 0.19.8.1 is already installed)
```

```
