Description:	Hi,
	I installed version 1.5.0 via homebrew on MacOS and installed "Linux Libertine" in /Library/Fonts
	When compiling an AMC-TXT project I get:
	<pre>
	VAR: project:moteur_latex_b=xelatex
	ERR: Les polices de caractères suivantes ne semblent pas installées sur votre système : Linux Libertine.
	Variables :
	</pre>
	I can live without Linux Libertine, and anyway I would like to use AMC-TXT to prepare my exams, but customize the result. Is there a template or something equivalent that I can modify in order to have control on the DOC-filtered.tex that I guess is the result of the .txt conversion?
	Thanks in advance,
	PS: I write in english so that it can help more people, maybe I shouldn't

History

I went back to https://github.com/maelvls/homebrew-amc and saw that I missed this:

<pre>
brew install homebrew/cask-fonts/font-linux-libertine
</pre>

which solved the font problem.

Nonetheless, I'm still curious about templating AMC-TXT format. Any pointer?

@DOC-filtered.tex@ is made from the AMC-TXT source file without any template. This is done with @AMC/Filter/plain.pm@.
