Figures in questions

[`find-rectangle-in-choices-horiz`]
Question   This is an example using small figures for each choice, set in horizontal. For choices in vertical shape, just use `choices`. Which of these figures is a rectangle?

[`is-rectangle-above-choices`]
Question   This is a trivial example with a figure above the choices, which are displayed in horizontal. What is this figure?

■ A rectangle   ☐ A triangle   ☐ A circle   ☐ An ellipse

[`is-rectangle-below-choices`]
Question   This is a trivial example with a figure below the choices, which are displayed in horizontal. What is this figure?

■ A rectangle   ☐ A triangle   ☐ A circle   ☐ An ellipse

[`is-rectangle-left-of-vertical-choices`]
Question   We now go with an example where the figure is placed left from choices, which are displayed in vertical. What is this figure?

■ A rectangle
☐ A triangle
☐ A circle
☐ An ellipse

[`is-rectangle-left-of-horiz-choices`]
Question   We now go with an example where the figure is placed left from choices, which are displayed in horizontal. What is this figure?

■ A rectangle   ☐ A triangle   ☐ A circle   ☐ An ellipse

[`is-rectangle-right-of-vertical-choices`]
Question   We now go with an example where the figure is placed right from choices, which are displayed in vertical. Everything is placed in the choices area. What is this figure?

■ A rectangle
☐ A triangle
☐ A circle
☐ An ellipse

[`is-rectangle-right-of-horiz-choices`]
Question   We now go with an example where the figure is placed right from choices, which are displayed in horizontal. Everything is placed in the choices area. What is this figure?

■ A rectangle   ☐ A triangle   ☐ A circle   ☐ An ellipse

[`is-rectangle-right-of-full-block-top`]
Question   In this example, the figure is placed right from all the text+choices block. Note that actual text will start as a block after the question header, we cannot integrate text with it, so we nedd to account for that space in the minipage size. This will look weird if tag is placed after the question header instead of above. What is this figure?

■ A rectangle

☐ A triangle

☐ A circle

☐ An ellipse

[`is-rectangle-right-of-full-block-top-newline`]
Question
In this example, the figure is placed right from all the text+choices block. To better place text a line break is used, actual text will otherwise start as a block after the question header, as in previous example. This will look weird if tag is placed after the question header instead of above. Not the best look, but a lesser evil that will work reasonably with tags both above and after the question header. What is this figure?

■ A rectangle

☐ A triangle

☐ A circle

☐ An ellipse

[`is-rectangle-left-of-full-block-top-newline`]
Question
In this example, the figure is placed left from all the text+choices block. Note that a line break is needed to allow everything be set to the left, since we cannot move the question header. Not the best look, but a lesser evil that will work reasonably with tags both above and after the question header. What is this figure?

■ A rectangle

☐ A triangle

☐ A circle

☐ An ellipse

[`is-rectangle-left-of-full-block-top-shifted-left`]
Question   In this example, the figure is placed left from all the text+choices block as before, but shifting the figure to try better placing. No line break is used and some extra manual tweak is needed. This will fail for long tags just after the question header, but will not look that bad if tag is placed above the question header. What is this figure?

■ A rectangle

☐ A triangle

☐ A circle

☐ An ellipse
