

Auto Multiple Choice - Support # 101: Does postcorrect actually needs insidebox?

Status:	Closed	Priority:	Normal
Author:	Jean-Baptiste Rouquier	Category:	Documentation

Description:	<p>The doc http://home.gna.org/auto-qcm/auto-multiple-choice.en/ar01s07.shtml#postcorrect says that when using the postcorrect option, one needs to also use the insidebox option.</p> <p>I would be grateful for an explanation of why this is the case.</p> <p>Also, I tested myself: I wrote two files with the postcorrect option, between which the only difference is the option insidebox / outsidebox. I don't see any difference in AMC's behavior (except the letters inside/outside the boxes, of course).</p> <p>So, can one simply use the outsidebox option even when using the postcorect option?</p> <p>Thanks!</p>

You're right: this is an error in the documentation, that will be corrected. What's important is to associate each box with an answer. This can be done using @insidebox@, but also in other ways.
