

Auto Multiple Choice - Bug # 115: Problems with parameters when decimal point is a comma

Status:	Closed	Priority:	Normal
Author:	Alexis Bienvenüe	Category:	
Created:	01/06/2013	Assignee:	
Updated:	03/08/2013	Due date:	
Description:	With some particular locales (when the decimal point is a comma) and environments (reported on opensuse 12.2), the numerical parameters are stored with a comma as a decimal point, and become unusable for AMC... See message#703. As a workaround, remove all parameters files (as @cf.default.xml@ in @\$HOME/.AMC.d@) and start AMC with LANG=C auto-multiple-choice		

History

This bug does not show on debian and derivatives, because @POSIX@ sets @LC_NUMERIC@ to @C@, overriding @Gtk2@ initialization:

```
perl -le 'use Gtk2 -init; use POSIX; print POSIX::setlocale(&POSIX::LC_NUMERIC)'
```

returns @C@ on debian and returns the current locale on OpenSUSE...
