Please post your scan.

01/09/2013 05:50 pm - red sea

01/09/2013 09:18 pm - Alexis Bienvenüe

These scans seem to work with me... Can you send me the project directory, and the log file from debugging mode?

01/09/2013 09:22 pm - Alexis Bienvenüe

You can get the debugging log creating a log file and then adding a @--debug@ option to @auto-multiple-choice@, like:

```
<pre>
touch /tmp/debug.log
auto-multiple-choice analyse --debug /tmp/debug.log --projet ./ ./scans/*
</pre>
```

01/10/2013 11:11 am - red sea

this is the debug file:

<http://www.gulfup.com/?P2UlcZ>

01/10/2013 02:07 pm - Alexis Bienvenüe

I don't see the reported error in the scan file. Please call analysis on a single problematic scan:

```
<pre>
cp /dev/null /tmp/debug.log
auto-multiple-choice analyse --debug /tmp/debug.log --projet ./ ./scans/problematic-scan-file.tif
</pre>
```

01/10/2013 03:03 pm - red sea

<http://www.gulfup.com/?Mw6Te5>

no error message when i analyse single tif file?!

01/10/2013 03:06 pm - Alexis Bienvenüe

> no error message when i analyse single tif file?!

Perhaps the error was showing when trying to analyse PDF files (@./scans/*@ selects all files, including PDF)? @auto-multiple-choice analyse@ can't handle PDF files (you have to use @auto-multiple-choice getimages@ first to convert PDF to bitmap format).

01/10/2013 03:13 pm - red sea

i deleted all pdf files in scans folder, but i got the same error message:

```
<pre>
auto-multiple-choice analyse --projet ./ ./scans/*
OpenCV Error: Bad argument (Bad image header) in cvCloneImage, file /build/buildd/opencv-2.3.1/modules/core/src/array.cpp, line 3108
terminate called after throwing an instance of 'cv::Exception'
what(): /build/buildd/opencv-2.3.1/modules/core/src/array.cpp:3108: error: (-5) Bad image header in function cvCloneImage

OpenCV Error: Bad argument (Bad image header) in cvCloneImage, file /build/buildd/opencv-2.3.1/modules/core/src/array.cpp, line 3108
terminate called after throwing an instance of 'cv::Exception'
what(): /build/buildd/opencv-2.3.1/modules/core/src/array.cpp:3108: error: (-5) Bad image header in function cvCloneImage
```

Page : +1/1/60+

Page : +3/1/58+

Page : +2/1/59+

```
</pre>
```

01/10/2013 03:17 pm - Alexis Bienvenüe

Please try to call the command with each single scan in turn, to find the problematic scan.

01/10/2013 03:23 pm - red sea

ok,

1.tif ... no error

```
<pre>
auto-multiple-choice analyse --projet ./ ./scans/1.tif
Page : +1/1/60+
```

```
</pre>
```

2.tif ... no error

```
<pre>
auto-multiple-choice analyse --projet ./ ./scans/2.tif
Page : +2/1/59+
```

```
</pre>
```

3.tif ... no error

```
<pre>
auto-multiple-choice analyse --projet ./ ./scans/3.tif
Page : +3/1/58+
```

```
</pre>
```

01/10/2013 03:43 pm - red sea

i changed the project, but i got the same problem, if i used :

```
<pre>
./scans/*
</pre>
```

the 2nd project..

<http://im33.gulfup.com/7EVL1.tif>

01/10/2013 04:19 pm - red sea

and the problem in the terminal not in gui.

01/21/2013 04:47 pm - Alexis Bienvenüe

Did you try

```
auto-multiple-choice analyse --projet ./ ./scans/*.tif
```

(to be sure only TIF files are selected)?

01/21/2013 11:54 pm - red sea

thanks, yes with *.tif was no error.

but i got this error:

```
<pre>
when i used "--assoc assoc.xml" with (auto-multiple-choice association-auto) in terminal i got this msg : assoc unknown option.
when i used "--bareme scoring.xml" with (auto-multiple-choice prepare) in terminal i got this msg : bareme unknown option.
```

```
</pre>
```

01/22/2013 05:35 am - red sea

the full code:

01/22/2013 04:56 pm - Alexis Bienvenüe

- % Done changed from 0 to 100

- Status changed from New to Closed

You must extract the scoring strategy with @auto-multiple-choice prepare --mode b [...]@ before marking with @auto-multiple-choice note@.

01/23/2013 11:22 am - red sea

i think the problem is :

- i used a omr form (design with AMC - postcorrect) without any Question, and there are no command line to choose the the teacher paper (right answers)?

regards
