

Auto Multiple Choice - Bug # 127: Problem when updating the number of questions

Status:	WontFix	Priority:	High
Author:	Benjamin BALET	Category:	
Created:	01/16/2013	Assignee:	
Updated:	01/16/2013	Due date:	
Description:	<p>When we update an extant LaTeX file and reduce the number of questions some files of the projects are not modified (e.g. bareme.xml). Let's take an example when you reduce the number of questions from 54 to 50. So if you make a test by scanning/mark another batch, the total number of questions (in CSV and look marks) is still 54.</p> <p>I think that this bug could be solved by feature request #125.</p>

- Status changed from New to WontFix

AMC is definitely not designed to get scans related to different source files (or different versions of the source file), with different number of questions or answers, in the same project directory.

You have to create another new project, possibly using the _Export as template_ / _New project from archive_ workflow.
