Description:	When generating annotated answer sheets regrouped for each student, non-simple characters are all converted to `_'. This causes all non-European names looks like _____. Since most modern filesystems support Unicode filenames, filename simplification should be an option. Ideally, it would be nice if whitespaces could also be used.

Uh, some text formatting worked unexpectedly.

I mean, Japanese student names are represented as:

<pre>

0001-_____.pdf

</pre>

- Target version set to 1.1.0

> Since most modern filesystems support Unicode filenames, filename simplification should be an option.

I agree with you.

> @0001-_____.pdf@

I think this is because the "file name model" was empty. In this case, the default model is used, which is @(N)-(ID).pdf@, where @(N)@ is replaced by the copy number, and @(ID)@ by the students name.
