

Auto Multiple Choice - Bug # 200: Gtk-WARNING: cannot open display ...

Status:	Closed	Priority:	Normal
Author:	Juliana Belding	Category:	
Created:	08/28/2013	Assignee:	
Updated:	10/31/2014	Due date:	
Description:	I'm new to this program, but have finally installed AMC on my Mac Mountain Lion, using the work around described in Bug #70 at the end (by Alban Mazerolles). It finally installed via Mac Ports, but now when I go to launch it via auto-multiple-choice I get the bug: Gtk-WARNING **: cannot open display: at /opt/local/lib/perl5/vendor_perl/5.12.4/darwin-thread-multi-2level/Gtk2.pm line 138. This seems similar to something described in the form (Erreur GTK2.pm) but my AMC-association.pl file is already updated to "require" instead of "use". The bug persists. Any advice would be great!

Did you install a X11 server? It seems that the DISPLAY environment variable is not set. Maybe try the following command (I don't know Mac OS but maybe that can help):

```
<pre>
DISPLAY=:0 auto-multiple-choice
</pre>
```

Thanks for the quick response. I did install XQuartz. When I try the command you mention in the terminal I get the following. Any thoughts?

```
Can't locate Module/Metadata.pm in @INC (@INC contains: /opt/local/lib/perl5/site_perl/5.12.4/darwin-thread-multi-2level

> Can't locate Module/Metadata.pm in @INC
Check that @p5-module-metadata@ MacPorts package is installed.

08/30/2013 07:07 pm - Juliana Belding

It was NOT installed and now that I did install it, auto-multiple-choice launches (with some errors, but nothing serious I think).

Thank you so much!!

- % Done changed from 0 to 100

- Status changed from New to Resolved

OK. @p5-module-metadata@ should be declared as a dependency somewhere...

> with some errors, but nothing serious I think

Yes, I think this won't hurt so much.
