

Auto Multiple Choice - Bug # 217: system-provided texlive update brokes dependencies of AMC (openSUSE 12.3)

Status:	Closed	Priority:	Normal
Author:	Roberto González	Category:	
Created:	10/03/2013	Assignee:	
Updated:	01/28/2021	Due date:	
Description:	<p>Hello.</p> <p>I'm using AMC 1.2.1 on openSUSE 12.3. Recently, I got a system update message related to texlive, but when I went to install it I was warned by the following message:</p> <pre><pre> auto-multiple-choice-1.2.1-102.1.i586 requires texlive-bin-latex, but this requirement cannot be provided. </pre></pre> <p>The system gave me three options:</p> <pre># Uninstall AMC # Don't install the patches. # Break AMC ignoring some of it's dependencies.</pre> <p>Obviously I won't uninstall AMC nor break it, but I would like to have my system packages up-to-date.</p> <p>The detailed information for the patches to be installed with the update is the following (both patches are related to package @texlive-bin-bin@: binary files of latex-bin):</p> <pre><pre> *openSUSE-2013-628* - texlive: roll up bugfix update</pre> <p>TeXLive was updated to fix various bugs.</p> <p>Following bugs were fixed:</p> <ul style="list-style-type: none">- Asymptote binaries may have the same version as the format files of the asymptote package it self (bnc#813032)- Change Obsoletes from < 2012+subversion to <= 2011 (bnc#811162)- Let mathdesign require tex(texnansi.enc) (bnc#808731)- Let biber-bin require perl(Text::BibTeX) (bnc#811258)- Do not require xfs as we do not use xfs at all, otherwise we have to add some more lua code in the %post scriptlet.- Let texlive-biber require perl(LWP::UserAgent) to be able to read system based certificates- backward compatibility Provides: texlive-bin-dvillj (SR#175836)- As lcdf-typetools does not support kpathsea nor search below texmf tree build the texlive-lcdftypetools(-bin) packages again and let them conflict with the lcdf-typetools package.- Let texlive-pdfjam require texlive-pdfpages (bnc#814804)- Let texlive-pdftools require texlive-pst-pdf (bnc#812286)- Correct license boolean for biber packages- Let texlive-tex4ht-bin conflict with ht due path /usr/bin/ht- Let texlive-lcdftypetools(-bin) packages depend on lcdf-typetools package or conflict.- Let texlive-arev require tex(mdacmr.fd) (bnc#819867)- Avoid line break in patch pgf_plain.dif (bnc#823273)- Avoid doubling mktex.opt content with excessive patch which had lead that the original content overrides the new one (bnc#801727)

801727 (bugzilla) : tenthousand tempdirs /tmp/.mt* per day?
813032 (bugzilla) : The asy binary in the texlive package crashes.
812286 (bugzilla) : texlive-pdftools-bin has dangling symlink: /usr/bin/ps4pdf ->
/usr/bin/./share/texmf/scripts/pst-pdf/ps4pdf
814804 (bugzilla) : pdfjam: pdfpages.sty missing
823273 (bugzilla) : https://bugzilla.novell.com/show_bug.cgi?id=823273
811162 (bugzilla) : texlive-scheme-medium won't install due to many uninstallable texlive components
811258 (bugzilla) : on opensuse 12.3 biber doesn't include a package dependency for perl-Text-BibTeX
808731 (bugzilla) : Publishing:TeXLive/texlive-specs-m: Bug – no pdf file produced
</pre>
```

And this one:

```
<pre>
```

```
*openSUSE-2013-653* - texlive: Drop dependency freeglut-devel of texlive-asymptote
```

This update fixes the following issues with texlive:

- bnc#833498: drop the dependency for freeglut-devel from texlive-asymptote again
- bnc#833815: explicite load PerlIO::encoding for output files, seems to be required for our perl
