Description:	Just installed auto-multiple-choice on Ubuntu 13.04 32-bit system. Tried to compile Lyx document that works on Ubuntu 13.10 64-bit system, and got this:
	
	   Latex Error: Unknown option `automarks` for package `automultiplechoice`.
	   Latex Error: \AMCsubjectPageTag undefined.		

History

That's because on Ubuntu 13.04 AMC is older and so @automarks@ is not available.

Try to install AMC from the "PPA":https://launchpad.net/~alexis.bienvenue/+archive/amc to have a newer version.

Interesting. The documentation that downloaded with the debian package showed automarks and made no mention of it being version-specific. I've been trying to upgrade that computer to 13.10 anyway, so here's another incentive.

Thanks!

- % Done changed from 0 to 100

- Status changed from New to Closed

A lot of features are added along the development of AMC, and so are version-specific. I did not have courage to tell the versions when they appeared in the doc...
