Description:	It would be nice to be able to record all the commands that I run when using the gui.
	In particular all the options used to call the python scripts.
	Is it easy? (at least with linux)
	Thank you very much for this great software, really useful!

I don't know if it can help with python stuff, but a solution can be to run in debugging mode, and look at the resulting @log@ file.

Yes it helps, thank you. I enabled debugging and then parsed with grep the log file for "Command".
