Auto Multiple Choice - Feature # 26: more option for AMCcode

Status:	WontFix	**Priority:**	Normal
Author:	red sea	**Category:**	
Created:	03/22/2012	**Assignee:**	
Updated:	04/17/2012	**Due date:**	

Description:	- make "\AMCcode{name}{10}" some options like the question.
	1- now we can control the number of columns (like {10} that means ten columns), i hope we can control the number of rows (like {5} means 5 boxs in every columns).
	2- i hope we have control the content of the boxs, like the boxs of question.
	in the box of question :
	the default content is (A)
	\wrongchoice{}%
	but when we added [Z], we can change A to Z :
	\wrongchoice[Z]{}%
	why:
	- to make \AMCcode for :
	status(student condition) - sex - term - sector - stage - ....
	whit professional design (i know we can now used a quastion form to do this with script in the head, but not easy for all and Form design is professional).
	best regards

History

03/22/2012 10:46 pm - red sea

As well as the possibility of writing beside the box.

03/22/2012 11:08 pm - red sea

Suggested to be this way:
\AMCcode{name}{columnsNum}{rowsNum}{}

when we want to write any thing beside the boxs..
\AMCcode{name}{columnsNum}{rowsNum}{
\text [m]{1}{male}
\text [f]{2}{female}
...

}

03/22/2012 11:14 pm - red sea

the content inside the box must be 1 number or 1 letter.

The user can do anything he wants using LaTeX commands, following the example of the @AMCcode@ definition in the style file. Just keep in mind that the scores from questions named @XXX.3@, @XXX.2@, @XXX.1@ will be concatenated to get the value of the field @XXX@ in the exported files.
