Auto Multiple Choice - Feature # 262: Correction of answers by students

Status:	Closed	Priority:	Normal
Author:	math user	Category:	
Created:	01/25/2014	Assignee:	Alexis Bienvenüe
Updated:	04/27/2015	Due date:	
Description:	Some multiple choice programs allow the correction of ticks at the wrong place by filling the box out. In AMC you can either tick the correct box or fill it out.		
	The third (new) option would be:		
	empty box means not ticked		
	ticked box means ticked (of course) - threshold e.g. 0.15		
	box filled out means not ticked (corrected) - threshold e.b. 0.6		

	_I guess that's it for today.		
	Thanks a lot for all your great work, Alexis!_

I agree, but I think it should be just an option, as you say. My school has document feeders with scanning capability, but the quality of the produced scans is not the best. So, we ask our students to fill out the boxes instead of marking them with an 'x'. If the behaviour you are proposing was set to default and the only option available, AMC wouldn't be usable for us.

- Status changed from New to In Progress

Please test a full cycle with the new version (set the _upper darkness threshold_ to 0.6 or so).

@Roberto: the default behavior stays unchanged. You have to set a new value to the _upper darkness threshold_ parameter to allow students to use this feature.
