Description:	I am using \AMCOpen to define open questions and do a manual correction. For proper point distribution, for a single question I would like to be able to put 3 crosses. Indeed, I have 15 boxes, for which the values are: 0 1 2 3 4 0 1 2 3 4 0 1 2 3 4 It is like having three different things to evaluate in the answer and giving between 0 and 4 points for each of them. Unfortunately if I cross 3 entries (e.g, the first 1, the second 2, and the third 4), AMC considers a total of zero instead of 7. Is there a way to have AMCOpen behave like questionmult ?

Include it inside a @questionmult@ (or @questionmultx@ to get the 'multiple' sign out) environment instead of a @question@ one.

Of course ...

Thank you very much
