Description:	<p>Hi,</p> <p>I'm using AMC from few months and I find it very useful. Moreover, I would like to have the possibility to create two versions of the same question, one with the correct response and one where the only correct response is "None of the other sentences is true". Obviously, at most only one of them should be present in each student's questionnaire. Is it possible?</p> <p>I know that I could create a separate group that contains these two questions, but it you be very painful doing this for a high number of questions.</p> <p>I have tried to assign the same question ID at these two questions, but I obtain the error message:"question ID used several times for the same paper". Is it possible to enable a flag that prevents the selection of questions with the same ID in each student's questionnaire?</p> <p>Regards</p> <p>Ivan</p>
