Description:	Use "Glib::Object::Introspection":https://metacpan.org/pod/Glib::Object::Introspection to dynamically create Perl language bindings. It will reduce the dependency on some packages like @libgtk2-notify-perl@. Also it looks like that Ubuntu does have any package which provides the @Gtk3::Notify@ module. So the only way to use notifications when AMC is migrated to Gtk3 is to use @Glib::Object::Introspection@. The list of packages which support @Glib::Object::Introspection@ is given at https://wiki.gnome.org/Initiatives/GnomeGoals/AddGObjectIntrospectionSupport

As @Gtk3@ module uses GObject introspection internally and since we are already using it for notifications (which has been done in commit:901b3c6 and commit:a97946b) I am marking this as closed.
