Description:	AMC prints the exams to seperate files in the /tmp directory with a temp file name like /tmp/GFTE3238Ses.pdf. My production process dictates that I provide the exam pdf files to a print shop. Separate file as those that are produced are just fine, I only would like them to be put in a user definable dir with sensible/recognisable names. My current work flow would name them exam_student_id.pdf where student_id is the number of the candidate. The exams could land in the 'project' dir under something like printout.		

History

When you choose the "to files" printing method in Edit/Preferences and click on "Print papers", you can select the folder where to place the individual PDF subject files (at the same time you choose which subjects to print), and their names are copie-0001.pdf, copie-0002.pdf and so on.

Isn't it nearly what you need?
