

Auto Multiple Choice - Bug # 331: Double-clicking should be enough on zoom window

Status:	Closed	Priority:	Normal
Author:	Martin Quinson	Category:	Graphical Interface
Created:	12/17/2014	Assignee:	
Updated:	02/07/2021	Due date:	
Description:	My students seem to be unable to properly check the boxes and keep doing very light checks. I could try to change my students, but I think it would be faster to improve my workflow in this case :) For now, I have to drag&drop in the Zoom window each of the boxes that are wrongly recognized by the tool, and that's burdensome. It would be much easier if double-clicking on a box would switch its category from unchecked to checked (or otherwise). Thanks for your work, Mt

You can choose `_click_` instead of `_drag and drop_` in the zooms window. Clicking will change category of a box, and right-click will change category of all boxes closer to the threshold.

I fail to find that setting, sorry. Where is it in the interface?

Thx, Mt

bottom-right — but you need the development version...
