

Auto Multiple Choice - Bug # 332: Weird things happen when having non ascii chars in question identifiers

Status:	Closed	Priority:	Normal
Author:	Martin Quinson	Category:	LaTeX
Created:	12/17/2014	Assignee:	
Updated:	02/07/2021	Due date:	
Description:	Hello, I was having a question which identifier was: "dépôt" as in <code>\begin{question}{dépôt}</code> In that case, I get no error message, but the question boxes are not part of the layout. That's an annoying pitfall, that should be fixed if possible. You could either make the mechanism robust to non-ascii chars, or issue an informative message when non-ascii chars are used, both approaches would fit my needs. Thanks again for that tool, Mt

Do you use development version of AMC? There should be warnings in such situations with recent version.

12/17/2014 04:25 pm - Martin Quinson

I use the regular Debian version:

ii auto-multiple-choice 1.2.1-3 amd64 Auto Multiple Choice - multiple choice papers management

12/17/2014 04:34 pm - Alexis Bienvenüe

Please try with development version (see [\[\[Building AMC from mercurial repository\]\]](#))
