<b>Updated:</b>	04/02/2012	<b>Due date:</b>	
<b>Description:</b>	<p>I know it is suboptimal, open choice wise, but sometime I have questions that have choices which should be graded individually.</p> <p>Like</p> <p>Two propositions: I Merkozy is the current president of the European Union.</p> <p>II The UK just entered the EURO zone.</p> <p>What is right? a: I=false, II=false, b: I=false, II=false c: I=false, II=false d: I=false, II=false,</p> <p>In that case you would want to grade a with 2 points, b and c with 1 and d with 0.</p>

Perhaps I misunderstood, but is it possible to use the following?

```
<pre>
```

```
\begin{questionmult}{test}\scoring{haut=2}
```

```
  Please select true propositions.
```

```
  \begin{choices}
```

```
    \wrongchoice{Merkozy is the current president of the European Union.}
```

```
    \wrongchoice{The UK just entered the EURO zone.}
```

```
  \end{choices}
```

```
\end{questionmult}
```

```
</pre>
```

#### 03/27/2012 10:03 pm - Pieter Van den Hombergh

Of course you are right again.

Since `_questionmult_` adds the option none of the above is right, the students can select the same combinations as in my current exam.

I will consider revising my exams.
