You could try

```
rpmbuild -tb auto-multiple-choice *_precomp.tar.gz
```

as per

<http://home.gna.org/auto-qcm/download-opensuse.en>

If you use 64bits Opensuse you need to edit the file /usr/bin/auto-multiple-choice and change line 28 from

```
$mods_dir="/usr/lib/AMC";
```

to

```
$mods_dir="/usr/lib64/AMC";
```
