<b>Description:</b>	Trying to build the deb packages on a ubuntu 14.0.4 (Trusty) I get an unmet dependency for a package that is not available in my distro or so it seems. My text live suggest texlive-lang-cjk instead. Is there a way to tweak this? Maybe it should change to cjk. Once i did that in <code>_amcdire/debian/control</code> I was able to build the deb files successfully.
