Note that in the CSV, the question numbers and answers refer to the unshuffled source file.

Can you post your source file and question sheet for student 1?

12/07/2016 01:02 pm - Yogesh Chaudhari

- File source.txt.txt added

Thanks, Now I have added Ordered before start of Question so that option wont shuffle. But now I am facing another problem.

This is my Question "[ordered,horiz,id=583d1f8c296d214bf5572afa] Javascript is _____ language."

When there is no space between * and [in above question its not recognising scan images. But we give space between * and [its working.

Please find below my Source file. Try to generate csv file and check sequence and its not recognising properly.
