

Auto Multiple Choice - Bug # 47: The dialog Save as template does not work properly anymore

Status:	Closed	Priority:	Normal
Author:	Pieter Van den Hombergh	Category:	
Created:	04/05/2012	Assignee:	
Updated:	04/15/2012	Due date:	
Description:	In the version from the ppa as well as in the svn trunk version, the Dialog *Save as a template* is not really usable. The text box for description is 0 pixels high, as well as the list of Included files. So you would be working blind or cannot see what is inside these boxes. Screenshot attached.		

History

The issue is in the GUI.

If you simply accept the defaults, it seems AMC added sensible files to the produced tar file.
(the main latex file and the options.xml).

You cannot however, add more files.

Priority should be set low, as there are usable work around. like creating the archive by hand.

I'm not sure this solves the problem (the problem does not show on my configuration), but I tried to fix this in revision r993: can you try it?

04/06/2012 03:53 pm - Pieter Van den Hombergh

I have svn updated and built deb again.

Issue is resolved in so far that when you resize (as in make bigger) the dialog, a readable list and an editable description field appear where they did not

in a previous version. This is usable.

Better still would be to make the default size of the dialog somewhat taller (higher).

04/07/2012 02:39 pm - Alexis Bienvenüe

Next try is in revision r996 (I added a height request as you suggested). I hope this works...

04/07/2012 09:54 pm - Pieter Van den Hombergh

Works.

Now the boxes are visible and usable immediately.

The default height now makes the list just big enough for two items, which is probably what one wants as a minimum.

Is there a way to increase the windows height, each time a included file is added? Then it would be perfect.

This could be ok at the beginning, but when the window reaches the bottom of the screen, this could make the things more complicated.

So I'm afraid I will let the user resize the window...

Agree on last remark.
