@S. McKay: I run some (too) simple tests but could not reproduce the problem. Can you tell me a little more about what you did? Versions used, actions performed? Or can you send me an archive with your project directory?

**06/01/2017 06:07 pm - S. McKay**

Sorry,  
We may be dealing with a communication problem (which I'm sure is my fault). I upgraded from 1.2.1 to 1.3.0 (specifically 1.3.0+hg2016-11-09) and that upgrade caused issues with the current project.

Is the development version now 1.4? That might be the misunderstanding. I upgraded using the page [http://project.auto-multiple-choice.net/projects/auto-multiple-choice/wiki/Building\\_AMC\\_for\\_MAC\\_OSX](http://project.auto-multiple-choice.net/projects/auto-multiple-choice/wiki/Building_AMC_for_MAC_OSX)

which specifically states that it is installing the development version.

So, before I try to run a test case (I cannot share the original project with you, as it has student names and grades in it), are we talking about different versions?

(maybe this is too late, sorry)

Any testcase with any version transition is interesting: just tell us the versions involved as much precisely as possible (the revision number in the mercurial repository is a must).

Yes, sorry. I don't have any machines running 1.2.1 anymore. I think we can move on :-)

OK, thanks.
