Description:	Hello, First I want to thank you for developing this mindbogglingly useful software! It will save me tons of drudge work and limit the opportunity for cheating in my exams for ~ 100 students. Great service! I have a MacBook OS 10.10.5, and installed Xquartz, Xcode, Macports, and finally AMC "\version{AMC 1.2.1 svn:1403 with style \$Revision: 431 \$}". I had PDFLatex preinstalled. Everthing worked great for the first test, until I reached the button "Code Name for Automatic Association", which did not produce a dropdown menu. My *.csv file, linking the student ID's to their names is OK: I can see the column headers in the dropdown menu for the button "Primary key from this list". The student ID's are also scanned correctly, as I verified with the "Look at Marks" button. I did notice however that the file "options.xml" does not list the student association code, "<assoc_code></assoc_code>", nothing in the middle. When I enter "pantherid" (my code) there manually nothing changes. In the LaTeX source code I have the commands "\AMCformBegin" and "\AMCcodeH{pantherid}{9}" in that order. My problem seems identical to bug # 103, listed on the forum, which was resolved over five years ago. Should I just upgrade to AMC version 1.3.0 for Mac? Or can this be resolved in version 1.2.1? Thanks again

1.2.1 is no more maintained.

If you are not in the middle of an exam with AMC, I think you should upgrade.

Thank you for the immediate response! I will upgrade before my next exam.

Or maybe this is related to #269? Can you check that `_Edit/Preferences/Main/Internationalization/LaTeX files charset_ is _not_ empty?` If it was empty, set it to the appropriate value, close AMC and re-open the project.

Yes,that solved it. Good thing I can read French. Thanks again!
