

Auto Multiple Choice - Bug # 501: Sending annotated papers to students with msmtplib

Status:	Closed	Priority:	Normal
Author:	Heiko Hornung	Category:	
Created:	10/17/2017	Assignee:	
Updated:	10/23/2017	Due date:	
Description:	When trying to send the annotated papers to students with msmtplib, I get no error in the UI, only the message "0 message(s) has been sent." Sending a plain text message with msmtplib on the command line works. I'm on Netrunner Linux, which is based on Debian Stretch. Sending the reports on another machine (Ubuntu 17.04), using the same project files, works. The only suspicious message in the log file is "Wide character in subroutine entry at /usr/share/perl5/Email/MIME/Encodings.pm line 55." mailing.log only says "Starting mailing...". Debug log attached

I'm afraid I can't reproduce the bug. I tried to install netrunner 17.06 (french), with auto-multiple-choice and msmtplib packages. I configured msmtplib and tried to send some emails with AMC — all went right.

Can you see anything special in your situation, in your settings, that could help me to reproduce the problem?

Unfortunately not. I've tried to compare my netrunner installation with the ubuntu installation of a friend, and found nothing that stands out. I was already expecting this, and opened the bug more for others that might be in the same situation. Thanks for trying. As a workaround, I wrote a small script that sends the feedback to my students.

Which netrunner version are you using? In what language did you install it?

10/23/2017 02:19 pm - Heiko Hornung

I found the problem: due to a Unicode issue with another perl script I had this in my .zshenv:

```
export PERL_UNICODE=SDA
```

When not setting this environment variable everything works fine, all emails are sent.

To answer your question, I'm running Netrunner 17.01 with stretch-backports, installed in English, and with this locale settings:

```
LANG=en_US.UTF-8
LANGUAGE=
LC_CTYPE="en_US.UTF-8"
LC_NUMERIC=pt_BR.UTF-8
LC_TIME=pt_BR.UTF-8
LC_COLLATE="en_US.UTF-8"
LC_MONETARY=pt_BR.UTF-8
LC_MESSAGES="en_US.UTF-8"
LC_PAPER=pt_BR.UTF-8
LC_NAME=pt_BR.UTF-8
LC_ADDRESS=pt_BR.UTF-8
```

LC_TELEPHONE=pt_BR.UTF-8
LC_MEASUREMENT=pt_BR.UTF-8
LC_IDENTIFICATION=pt_BR.UTF-8
LC_ALL=

Thanks for sharing: I would not have found the problem!
> When not setting this environment variable everything works fine, all emails are sent.
Good!
