Description:	<p>Hello</p> <p>I am using AMC since many years and i am very happy with it.</p> <p>I may have a bug....</p> <p>I am using theses versions:</p> <p>This is AutoMultipleChoice, version 1.4.0~beta2 (r:4cf8d48)</p> <p>Perl: /usr/bin/perl v5.26.1</p> <p>When I try to mark the scanned pages, marking process runs, but in the log I see the error message: Can't call method "set_type" on an undefined value at /usr/share/perl5/AMC/Scoring.pm line 186.</p> <p>Marking doesnt finish properly and I cannot continue to export data...</p> <p>I dont know how to solve this error ... Maybe you can help me.</p> <p>Maybe this can be helpful: when I created the project and layout I used Ubuntu 14.04 version (with latex and amc versions shipped) and in the meantime i upgraded to ubuntu 18.04 and the upgraded latex/am versions. Maybe this is correlated to that?</p> <p>I attached the AMC log file.</p> <p>Best thanks for any help.</p>

Did you tick the box `_Update marking scale_` before clicking on `_Mark_`?

02/08/2021 11:25 am - Alexis Bienvenüe

- Status changed from *New* to *Closed*

- % Done changed from 0 to 100
