<b>Description:</b>	Hi,  I'm looking for software to analyse questionnaires for market research. Because I have to digitalise huge amounts of data with statistical software, I must have for every answer sheet all answers seperated, without marks or scores.  Is it possible with AMC to create a database or table more or less like this:  Three questions: QUESTION 1: is this product useful? (yes/no) QUESTION 2: how satisfied are you about this product? (Score 1-7/7) QUESTION 3: A:"I don't think this prduct will ever be succesful" B:"I think this product might be succesful" C:"I think this product will certainly be useful for a small group of people" D:"I think this product will be a massive succes"    QUESTION 1   QUESTION 2   QUESTION 3    PERSON 1   yes   score 3/7   answer A    PERSON 2   yes   score 6/7   answer B    PERSON 3   no   score 1/7   answer D    Is it possible with AMC to make questionnaire sheets that are after distribution and recollection being scanned, there could be an output, given by AMC that gives for every question the answer of every student, so I can process these data with eg. MS Excel or SPSS? Even if the data are symbolic (e.g Yes=1 No=0), this could be already a good help for me.  Thank you all!  Kind regards.  Fred

- Description changed from Hi,

*I'm looking for software to analyse questionnaires for market research. Because I have to digitalise huge amounts of data with statistical software, I must have for every answer sheet all answers seperated, without marks or scores.*

*Is it possible with AMC to create a database or table more or less like this:*

*Three questions: QUESTION 1: is this product useful? (yes/no)*

*QUESTION 2: how satisfied are you about this product? (Score 1-7/7)*

QUESTION 3: A:"I don't think this product will ever be successful"

B:"I think this product might be successful"

C:"I think this product will certainly be useful for a small group of people"

D:"I think this product will be a massive success"

|QUESTION 1 | QUESTION 2 | QUESTION 3 |

PERSON 1 | yes | score 3/7 | answer A |

PERSON 2 | yes | score 6/7 | answer B |

PERSON 3 | no | score 1/7 | answer D |

Is it possible with AMC to make questionnaire sheets that after distribution and recollection being scanned, there could be an output, given by AMC that gives for every question the answer of every student, so I can process these data with eg. MS Excel or SPSS? Even if the data are symbolic (e.g. Yes=1 No=0), this could be already a good help for me.

Thank you all!

Kind regards.

Fred to Hi,

I'm looking for software to analyse questionnaires for market research. Because I have to digitalise huge amounts of data with statistical software, I must have for every answer sheet all answers separated, without marks or scores.

Is it possible with AMC to create a database or table more or less like this:

Three questions: QUESTION 1: is this product useful? (yes/no)

QUESTION 2: how satisfied are you about this product? (Score 1-7/7)

QUESTION 3: A:"I don't think this product will ever be successful"

B:"I think this product might be successful"

C:"I think this product will certainly be useful for a small group of people"

D:"I think this product will be a massive success"

|QUESTION 1 |QUESTION 2 |QUESTION 3 |

|PERSON 1 | yes | score 3/7 | answer A |

|PERSON 2 | yes | score 6/7 | answer B |

|PERSON 3 | no | score 1/7 | answer D |

Is it possible with AMC to make questionnaire sheets that after distribution and recollection being scanned, there could be an output, given by AMC that gives for every question the answer of every student, so I can process these data with eg. MS Excel or SPSS? Even if the data are symbolic (e.g. Yes=1 No=0), this could be already a good help for me.

Thank you all!

Kind regards.

Fred
