Auto Multiple Choice - Bug # 700: Changed students codes are not updated

Status:	Closed	Priority:	Normal
Author:	Florent Bouchez Tichadou	Category:	
Created:	01/27/2020	Assignee:	
Updated:	12/21/2020	Due date:	
Description:	Students often make a mistake when encoding their (anonymous) number for the exam.		
	When I try to manually correct the codes, AMC still "remembers" the old version and just concatenates (and mixes) numbers.		
	For instance a wrong number was :		
	11246049		
	which I corrected into :		
	19001801		
	However, AMC now thinks the number is :		
	119080112460649		
	(I even tried modifying it in the scoring_code database but with no luck :-().		

History

01/27/2020 02:30 pm - Florent Bouchez Tichadou

Found the problem : the sql statement checks for manual OR filled box, so does not check if box has been un-checked.

Here is a patch:
