Description:	<p>Dear All,</p> <p>Is there a feature that enables to email tests individually to students after they've been obtained in a single pdf file, with each test "parameterised" to differ across students?</p> <p>This feature is similar to the one enabling to email corrected tests, except that I would like to send test papers which students will solve @home.</p>

- Status changed from New to Feedback

This feature has just entered the development version (git:3a26f34c654 or 1.4.0+git2020-03-29-1 on

"launchpad":<https://launchpad.net/~alexis.bienvenue/+archive/ubuntu/test>), and you can test it. You need to use pre-association and print your subject `to files' before sending these PDF question sheets to the students, based on the emails stored in a CSV file with all students.
