The following works for me
inside the product environment

```
<pre>
\begin{examcopy}[2]
\coverpage
\shufflegroup{general}
\insertgroup{general}
\AMClabel{lastpage}
\AMCcleardoublepage
\AMCformBegin
\answerFormHead
\begin{multicols}{2}
\AMCform
\end{multicols}
\AMCcleardoublepage
\end{examcopy}
```

```
</pre>
```

in particular the `\begin{multicolumns}{2}` does the trick.
See attachment for the result (of the answer page only).

thanks, but i cant't do it.
please see the attachment file.

The trick from Pieter Van den Hombergh seems to work for your @separate.tex@: add

```
<pre>
\usepackage{multicol}
</pre>
before @\usepackage{arabxetex}@, and replace @\AMCform@ by
<pre>
\begin{multicols}{2}
\AMCform
\end{multicols}
</pre>
```

- File docrorah2.tar.gz added

thanks, but no text now.

This works for the first source file you posted, so the problem is in the second one: you used there the @\element@ command inside a @longtable@ environment, which is not a right way to write things. The @\element@ command don't write anything, but inserts some commands into a list. If you call it inside an environment, its action will be local, so that the @\insertgroup@ called outside this environment won't be aware of all you did inside it with @\element@...
