

Auto Multiple Choice - Feature # 791: [info] Packaging AMC on Nix/NixOS

Status:	Closed	Priority:	Normal
Author:	Thibault P	Category:	
Created:	10/27/2021	Assignee:	
Updated:	11/05/2021	Due date:	
Description:	<p>AMC has been packaged for Nix/NixOS, and has been submitted as a PR: https://github.com/NixOS/nixpkgs/pull/143160</p> <p>Maybe it would be nice to add a page to the site with Nix(OS) installation instructions, but not before, of course, the package reaches unstable.</p> <p>Because of the way Nix works (no HFS), it's less easy to expose the .sty file to the latex install than on other systems. There are instructions on the package, but I think I'll also add a simple wrapper, say @latex-with-amc@ or something, to run arbitrary program with TEXINPUTS extended with the path to @automultiplechoice.sty@.</p>

Please tell us when this will be the case.

> There are instructions on the package, but I think I'll also add a simple wrapper, say latex-with-amc or something

Maybe you can add a wiki page for Nix, and I'll make a link from the website to it.

AMC is now on NixOS unstable. It doubt it will be part of the 21.11 stable release due this month, so its first stable will probably be 22.05 (versions are YY.MM)

> Maybe you can add a wiki page for Nix, and I'll make a link from the website to it.

Will do when I find the time, hopefully this or next week.
