I received your project and tested it on my computer. Unfortunately, this works for me (no crash). Can you run AMC in debugging mode (from the menu "Help"), reproduce the crash and send the resulting log file?

ok, i sent debug file by email.

Relevant message from your log file:

<pre>

perl: magick/semaphore.c:526: LockSemaphoreInfo: Assertion `semaphore_info->signature == 0xabacadabUL' failed.

</pre>

I tried to fix this bug with revision r1191, uploaded to the "AMC test" PPA (will be compiled there in a couple of hours). Please test it.

thank you.

now amc not crach, but can't read over than 1 box in the first paper and 3 boxes in the 2nd paper.

so amc not corrected the papers?!

Your project runs properly on my computer, so I need some more information. Please send me:

the complete project directory on your computer, as is (don't remove any file, and send me the directory after all the processing you made)

a log file produced when running automatic association in debugging mode.
