<b>Description:</b>	<p>In the choice of the column containing the identification of the students, auto-multiple-choice only offers those columns that contain no duplicate. This is a sane safety feature. However I was not aware of it and I spent a good deal of time wondering why my column did not appear. It's only by dichotomy on the file that I finally figured out that my file was broken with two students having the same id.</p> <p>I would suggest instead to display all columns; and then, once one of them is selected, to pop up if needed an error like ``column xxx contains a duplicate id: xxx".</p>
