Description:	I'm using auto multiple choice 1.5.3 on Ubuntu.
	I want to change the scoring of some questions but asking for 'Mark' again with the flag 'Update marking scale' has no effect.
	As for example, I changed \scoring{formula=NBC-NMC} to \scoring{formula=NBC} to some questions for which I am sure that some students answered wrong.
	This is a feature I used a lot in the past and I really do not understand what is happening today.
	Thanks for any help.

A wrongly inserted '}' from my side was the reason of this behavior.

Please remove my previous question.
