Alors cette partie du message signale un problème avec les outils ligne de commande Xcode. Avez vous correctement installé Xcode et le outils ligne de commande ?

> Error: Failed to activate opendetex: Image error: /opt/local/bin/detex is being used by the active detex port. Please deactivate this port first, or use 'port -f activate opendetex' to force the activation.

> Error: See

`/opt/local/var/macports/logs/_opt_local_var_macports_sources_rsync.macports.org_macports_release_tarballs_ports_tex_opendetex/opendetex/main.log` for details.

> Error: Unable to execute port: upgrade texlive failed

>

> Avez vous une solution à ce problème ? Merci

La solution est indiquée dans le message d'erreur. Essayez la commande suivante puis relancez l'installation.

```
<pre>sudo deactivate opendetex</pre>
```

Bonjour

Merci pour votre aide.

Malheureusement, un second problème succède au premier :

```
lioneljardot@Mac ~ % sudo port install auto-multiple-choice -x11 +no_x11 +quartz
```

```
--> Computing dependencies for auto-multiple-choice
```

```
--> Cleaning auto-multiple-choice
```

```
--> Scanning binaries for linking errors
```

```
Warning: Error parsing file /Applications/MacPorts/Python 3.10/Python Launcher.app/Contents/MacOS/Python Launcher: Error opening or reading file
```

```
Warning: Error parsing file /Applications/MacPorts/Python 3.8/Python Launcher.app/Contents/MacOS/Python Launcher: Error opening or reading file
```

```
Warning: Error parsing file /Applications/MacPorts/Python 2.7/Python Launcher.app/Contents/MacOS/Python Launcher: Error opening or reading file
```

```
--> Found 1 broken file, matching files to ports
```

```
Warning: No port opencv found in the index; can't rebuild
```

```
--> Broken files found, but all associated ports are not in the index and so cannot be rebuilt.
```

```
lioneljardot@Mac ~ %
```

MacPorts a été mis à jour (selfupdate et upgrade outdated)

Quelqu'un pourrait il m'aider à nouveau ?

**08/05/2022 10:56 am - Joël Brogniart**

Je pense que le plus simple serait, si c'est possible, de partir d'une installation vierge.

Pour cela, nettoyer les paquets installer.

```
<pre>
sudo port uninstall installed
</pre>
```

Ensuite mettre à jour MacPorts.

```
<pre>
sudo port selfupdate
</pre>
```

Et lancer l'installation d'AMC (directement la version développeur qui est la plus récente).

```
<pre>
sudo port install auto-multiple-choice-devel -x11 +no_x11 +quartz
</pre>
```
