Description:	<p>I am considering to provide the amc service to my colleagues. It is working at the moment with an X-server session and possibly with a VNC-server/client too.</p> <p>It lets me maintain the latex +AMC enviroment.</p> <p>It makes it workable for one of my colleagues with a ubuntu laptop and X.</p> <p>To make it even more comfortable (think Windows users) I am also considering to use the command line version of auto-multiple-choice in combination with a small web site.</p> <p>In particular for the whole work flow of preparing the print outs, calibrating, reading the scans and marking it should be very simple to set up such a server with some perl/php. Once it is ready I will be glad to share (of course)</p> <p>Process would be</p> <ul style="list-style-type: none"># Pick project name (Subject+date of exam). This creates the project directory.# Point to repository of question set or modules (course). They all should have a fixed structure as they have in my practice# upload the set of students in students.csv to the said directory.# choose or upload the questions file. We combine all questions in one file named questions.tex and per line something like <code>\element{general}{\inputQ{patterns/oMatchesAdapter.tex}}</code># Run all steps until print ready.# after the exam, upload the scanned file# do the post processing. <p>For all that I need to know how to prepare an empty AMC project, just like the GUI does when you prepare a new project.</p> <p>Is the command to prepare a AMC-project directory documented somewhere?</p>		

History

Very interesting!

> Is the command to prepare a AMC-project directory documented somewhere?

The only thing to do is create the (empty) directory structure, and put your subject and students list there. You can get some hints from [\[\[Using AMC in command line only\]\]](#).

Good pointer and very helpful.

How can I correct my typo in the subject in an issue?

It should read 'Is the '\prepare project\' command documented' without the first t in Its.

10/30/2012 09:49 pm - Alexis Bienvenüe

- *Subject changed from Its the 'prepare project' command documented to Is the 'prepare project' command documented*

12/18/2012 05:43 pm - Alexis Bienvenüe

- *% Done changed from 0 to 100*

- *Status changed from New to Closed*
