Description:	It appears that LaTeX of AMC tries to fit questions onto one page. This is Okay. However, sometimes one needs a question-text which covers more then one page. Think of an MC question about some kind of implementation in some source code. You want to let the student choose the correct implementation. In such case we us the listings package to include those listings. Often the listing boxes need to be spread over more then one page.

The @automultiplechoice@ LaTeX package encloses all questions inside a @minipage@ environment (so that they fit on a single page) _only if the *box* package option is used_. Did you try without this option?

11/06/2012 05:07 pm - Pieter Van den Hombergh

Very good. That is the trick. I somehow used box as a default option.

Then this issue may be closed.
