Updated:	09/19/2024	**Due date:**	
Description:	In version 1.6.0+git20240317102301 installed with MacPorts on macOS Sonoma, it is not possible to change the categorization of checkboxes extracted from the scan after automatic input using drag and drop. When attempting to drag and drop a box from one area to another, nothing happens, and the terminal displays the following message: Use of uninitialized value $id in concatenation (.) or string at /opt/local/lib/perl5/vendor_perl/5.34/AMC/Gui/Zooms.pm line 519. Use of uninitialized value $id in hash element at /opt/local/lib/perl5/vendor_perl/5.34/AMC/Gui/Zooms.pm line 521.
