

Auto Multiple Choice - Bug # 942: Error installing on macOS Sequoia with homebrew

Status:	New	Priority:	High
Author:	Rodrygo Santos	Category:	
Created:	11/05/2024	Assignee:	
Updated:	11/05/2024	Due date:	
Description:	<p>I've been using AMC successfully on older macOS versions. However, when attempting to install it on a new MacBook Air M3 running macOS Sequoia (15.0.1) via Homebrew, the installation fails with this error:</p> <p>Error: openssl@1.1 has been disabled because it is not supported upstream! It was disabled on 2024-10-24.</p> <p>It appears that AMC, or one of its dependencies, is still linked to openssl@1.1, which was deprecated by Homebrew on October 24, 2024, due to upstream discontinuation.</p> <p>Question: Are there any plans to update AMC's dependencies to replace openssl@1.1 with a supported version, such as openssl@3? Or is there an alternative installation method recommended for macOS 15?</p>

There is a pull request that suggests to change the version in the HomeBrew formula:

<https://github.com/maelvls/homebrew-amc/pull/92/files>

Maybe this can help?
