Description:	Hi there		

Hi there

Every time an external program is started from AMC (e.g. texmaker, gedit, evince,...), it creates a zombie process when it exits. If one works intensively with AMC he/she can generate dozens of zombies, resulting in a loss of performance. Exiting AMC will destroy all zombies.

Can this be improved?

Cheers,
Michele

PS: We are using using AMC 1.5.2 on Fedora Linux 40 (soon 41).
