Description:	<p>Dear developers,</p> <p>I just tried to install AMC on a Mac running Ventura 13.6 and after typing the homebrew formula I got the following error:</p> <p>Error: openssl@1.1 has been disabled because it is not supported upstream! It was disabled on 2024-10-24.</p> <p>Looking around the web this seem to be more an issue of the package requiring to install openssl@1.1, so I wonder if the package should update this requirement to a newer version of openssl. The problem remained even after installing a new version of openssl (openssl@3).</p> <p>Regards,</p> <p>Mauro</p>
