Description: Hi !

When using an ODS export of a AMC exam, I found that the "question statistics" page identifies each question with letters A, B, C... This may not be very readable without information about which label correspond to each answer (for now, we only see the correct/incorrect answers).

Is this possible to change this behavior ? How I see it, you should be able to write a single-answer question with :

```
<pre>
\begin{choices}
  \bonne[correct]{\python{tuple, float, bool, list}}
  \mauvaise[err float]{\python{tuple, int, bool, list}}
  \mauvaise[err bool and list]{\python{list, int, int, str}}
  \mauvaise[err list and list]{\python{tuple, float, bool, str}}
\end{choices}
</pre>
```

and on the ods export you may have :

```
<pre>
Box  Nb  /all  /expr
ALL  45
NA  0  0%
INVALID  0  0%
correct  36  80%  80%
err float  5  11%  11%
err bool and list  0  0%  0%
err list and list  4  9%  9%
</pre>
```

instead of :

```
<pre>
Box  Nb  /all  /expr
ALL  45
NA  0  0%
INVALID  0  0%
A  36  80%  80%
B  5  11%  11%
C  0  0%  0%
D  4  9%  9%
</pre>
```

that we get right now.

I know that \bonne & \mauvaise commands may have optionnal arguments already, I can't find their

documentation. Maybe there is a way to put it in a second one ?

Thanks for this wonderful software !
